DETAILED ACTION

1. This is in response to the amendment filed on 08/09/04.

Allowable Subject Matter

2. Claims 1-25 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

Applicants have amended the claims in accordance to the office action dated 08/02/04 to correct formal matters. The present invention relates to the recovery of timing in a wireless communication system. Prior art of record (closest reference US patent 6,055,284) taking individually or collectively, fails to fairly teach an improved timing recovery system and method, as claimed, that provides reduced processing load and reduced timing error including "interpolating the received signal based on a plurality of predetermined interpolation coefficients to produce an interpolated signal; sampling the interpolated signal based on a sampling rate to produce a plurality of sampled signals; interpolating each sampled signal of the plurality of sampled signals based on at least one dynamically determined interpolation coefficient to produce a plurality of interpolated and sampled signals; determining a timing error based on the plurality of interpolated and sampled adjusting the sampling rate based on the determined timing error" in independent claim 14 and similarly in independent claims 1 and 22 (claims 2-13, 15-21, 23-25 depend therefrom). Thus, claims 1-25 are found to be novel and unobvious over prior art of record.
